Art Unit: 1775

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 19-31 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 19,20,21 and 31 there are no units for the hardness value, rendering all the claims indefinite.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

4. Claim 31 is rejected under 35 U.S.C. 102(b) as being anticipated by Vaz et al ("Physical,...films').

Vaz et al discloses the claimed (Ti,Si)N film within the claimed crystal structure and hardness.

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 1775

6. Claims 19-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Vaz et al ("Physical...films") in view of Kukino et al (5,700,551).

Vaz et al discloses an (Ti,Si)N film and not the claimed Cr, Zr, Hf, or B inclusion.

Kukino et al discloses it is known to include these components in TiN films to produce cubic films.

Thus it would have been obvious to one of ordinary skill in the art to substitute the Si in Vaz et al with the claimed components, as these components are known in the coating art to behave as Si, as shown by Kukino et al.
